

**Table 1: Before and After the Launch of the Sepsis Screening Tool**

	Preintervention group	Postintervention group	
Order set use	51.72%	65.05%	p=0.001
Time zero to antibiotics average	135.2 min (range 1-1262)	117.5 min (range 2-1580)	
Inpatient length of stay average	6.25 days (range 0.28-55.75)	6.23 days (range 0.29-55.35)	
Survival rate at discharge	90%	93.28%	
<b>3H perfect care</b>	59.39%	69.09%	
3H lactate	91.95%	94.09%	
Blood culture	87.74%	90.86%	
Antibiotics	79.69%	83.87%	
Fluid resuscitation†	27.37%	60.55%	
<b>6H perfect care*</b>	29.29%	41.03%	
6H lactate*	63.64%	76.11%	
Vasopressor*	34.29%	47.92%	
Reassessment*	0	1.22%	
<b>Total perfect care</b>	40%	50.27%	
*The denominator based on the number of patients who met criteria for that intervention
