

Table 2: The Association Between the Usage of Sepsis Order Set and the Primary Outcomes

	Order set usage		<i>p</i>
	No (n=255)	Yes (n=377)	
Time zero to antibiotics average	157 mins	103 mins	0.001 ^a
Inpatient length of stay average	7.28 days	5.54 days	0.002 ^b
Survival rate at discharge	89.8%	93.37%	0.109 ^c

^aIndependent t-test

^bNegative binomial logistic regression

^cLogistic regression
