

**Table 3: The Association Between the Total Perfect Care, Order Set Usage, and the Primary Outcomes**

	Total perfect care		<i>p</i>
	Nb(n=341)	Yes(n=291)	
<b>Order set usage</b>	46.9%	74.6%	<0.001 <sup>a</sup>
<b>Time zero to antibiotics average</b>	172 mins	69.5 mins	<0.001 <sup>b</sup>
<b>Inpatient length of stay: average</b>	6.96 days	5.4 days	0.004 <sup>c</sup>
<b>Survival rate at discharge</b>	85.92%	98.97%	<0.001 <sup>d</sup>

<sup>a</sup>Chi-square

<sup>b</sup>Independent t-test

<sup>c</sup>Negative binomial logistic regression

<sup>d</sup>Logistic regression
